MANDATE

Independent Deep-Tech Venture Studio

Intra Temporal Ventures brings together scientific scouting, rigorous investigation, technical analysis, and venture creation. We examine technologies, markets, claims, and physical systems to understand what the available evidence can establish — and where important questions remain open.

As a specialist boutique, our centre of gravity is the intersection of fundamental physics, neuroscience, quantum systems, and commercial application. We are engaged to be the objective technical truth-tellers: the party that divorces scientific reality from investment hype, whose only obligation is to the evidence.

Core Principles:

- Evidence and source context considered before conclusions are drawn.
- Corroboration, contradiction, and alternative explanations examined.
- Clear distinction between fact, inference, hypothesis, and uncertainty.
- Findings communicated in a form suited to the question and audience.

APPROACH

From Theory to Application

Information is a starting point, not a conclusion. We examine material in context, test the strength of the available support, and consider what the evidence does — and does not — justify saying.

The Pipeline: Define → Collect → Verify → Analyse → Build

Operational Stance:

- Investigative rather than assumption-led.
- Open to competing explanations and correction.
- Focused on useful findings, not dramatic presentation.
- Scope and conclusions remain proportionate to the evidence.

SERVICES

Deep-Tech Services

A connected range of research, validation, and venture services. The exact scope of an engagement depends on the question, available sources, agreed objectives, and applicable legal and ethical boundaries.

SERVICE 01 // SCOUTING

Frontier Technology Scouting
Systematic collection and examination of relevant information from public, accessible sources (scientific literature, patents, regulatory filings) to establish context, reconstruct events, and identify lines of inquiry.

- Public-record and documentary research.
- Source assessment and corroboration.
- Digital-footprint and timeline research.
- Evidence mapping and information gaps.

SERVICE 02 // INVESTIGATION

Technical & Scientific Due Diligence
Structured research into companies, research groups, and technical claims, helping clients develop a clearer picture before consequential investment or partnership decisions.

- Scientific reproducibility and peer-review analysis.
- Relationship and chronology analysis.
- Reputational and documentary due diligence.
- Inconsistency and technical claim assessment.

SERVICE 03 // COMMERCE

Market & Commercial Intelligence
Research into market conditions, sector developments, competitors, and commercial shifts, distinguishing observed developments from interpretation and forecast.

- Market and sector research.
- Competitor and company-development analysis.
- Technology, supply-chain, and industry shifts.
- Commercial context and emerging risk factors.

SERVICE 04 // GLOBAL CONTEXT

Physics, Neuroscience & Quantum Systems
Independent examination of developments where fundamental science, policy, infrastructure, and international competition intersect.

- Artificial intelligence and computing infrastructure.
- Quantum technologies and advanced materials.
- Neuroscience and biological systems.
- Capability claims, dependencies, and strategic implications.

SERVICE 05 // ANALYSIS

Independent Technical Assessment
Synthesis of relevant information into a structured assessment of what is known, what is supported, what remains uncertain, and which questions warrant further examination.

- Evidence and competing-explanation review.
- Emerging issue and risk assessments.
- Cross-source comparison and synthesis.
- Findings, limitations, and further research priorities.

SERVICE 06 // COMMISSIONS

Bespoke Research & Venture Commissions
Tailored inquiries for questions that do not fit a standard category. Each commission begins by clarifying the question, the intended use of the findings, and the realistic scope of the research.

- Defined research briefs.
- Specialist technical reports.
- Document-based dossiers and briefings.
- Independent articles and commissioned publications.

PUBLICATION

Research Made Legible

Discovery does not end with collection. Findings must be organised, contextualised, and communicated so that readers can understand the evidence, the reasoning, and the limits of the assessment.

Output Formats:

- Technical reports
- Research papers
- Market reports
- Investigative dossiers
- Strategic briefings
- Long-form articles

ENGAGEMENT

How an Inquiry Begins

A proportionate process helps establish whether the question can be investigated, what material may be available, and what form of work is appropriate.

STEP 01 // Define the question

Clarify the issue, the context, and what the client needs to understand.

STEP 02 // Assess the scope

Consider source availability, constraints, objectives, and practical boundaries.

STEP 03 // Agree the work

Confirm the proposed scope, deliverable, timescale, and fee before work begins.

STEP 04 // Report the findings

Present supported findings, relevant context, limitations, and open questions.

No investigation or commission is implied by an initial enquiry. Any engagement would be subject to an agreed scope, appropriate terms, and the applicable legal and ethical requirements.

STANDARDS

Integrity Without Theatre

A compelling story is not proof. A pattern does not, by itself, establish causation. Confidence should follow the quality of the evidence, not the force of the narrative.

Evidence before assertion:	Claims should be proportionate to the material supporting them.
Verification before confidence:	Sources and corroboration matter more than volume alone.
Context before interpretation:	Information is examined within its relevant setting.
Inference kept visible:	Observation, interpretation, and hypothesis are not interchangeable.
Uncertainty acknowledged:	Limits and unresolved questions are stated rather than concealed.
Responsible investigation:	Work must respect applicable law, privacy, and confidentiality obligations. We do not conduct corporate espionage or unauthorized access.

INITIAL ENQUIRIES

Have a Question Worth Investigating?

Describe the question you are trying to resolve and the context in which the findings would be used. An initial discussion can help establish whether the inquiry is suitable and what a proportionate scope might look like.

Contact:

contact@intratemporal.ventures

Intra Temporal Ventures is committed to rigorous research, evidence-led analysis, and clear communication of findings. Our work distinguishes established facts from informed assessment, identifies uncertainty where it matters, and treats sources and conclusions with appropriate care. Every inquiry is shaped by its purpose, scope, and available evidence.
